

Dara Phillips

Product Designer & Front-End Developer

Limerick, Ireland · (+353) 083 099 9330 · daraphillips.design@gmail.com · daraphillips.com

Product Designer and front-end developer working across interface design and code, building interactive, motion-driven products end-to-end — from Figma prototypes and user flows through to responsive, production-ready implementation in React, Unity, and beyond. Drawn to how design shapes behavior, with hands-on experience using AI-assisted workflows (Claude) to accelerate design-to-code handoff.

WORK EXPERIENCE

Freelance Product Designer

06/2025 – Present

- Partner with early-stage B2B startups to translate loosely defined requirements into structured user flows, wireframes and high-fidelity prototypes.
- Lead end-to-end design across 3+ concurrent projects, running usability reviews and iterative prototyping to sharpen task clarity and onboarding flow.
- Deliver reusable, WCAG-compliant UI systems with clear developer handoff documentation, ensuring design intent survives into shipped product.
- Designed and migrated a WordPress site for the Irish Bee & Heritage Foundation, including donation and payment collection flows, content and navigation.

SELECTED PROJECTS

Full case studies at daraphillips.com

OrthoVive — Med-Tech Prototype, Figma (NDA)

Case study on request

- Designed a Figma prototype for a knee-rehabilitation med-tech device across two iterations. Used Claude to map flows from the brief, then reworked the design around stakeholder feedback into a build-ready structure.

Cruciate — ACL Rehab App

daraphillips.com/cruciate

- Designed and built a mobile-first ACL rehab app (React, TypeScript, Supabase) with a phase-by-phase recovery plan, range-of-motion logging and trend charts. Safety built in: a daily symptom check-in pauses exercises when something is flagged, and loaded exercises stay locked until the user is cleared.

Operation Avocado — Workout Tracker

daraphillips.com/operation-avocado

- Designed and shipped a free workout tracker (TypeScript, Firebase) built around a customisable workout builder instead of paywalled programmes. Tested through task-based shadowing, added behavioural nudges to onboarding, and directed the build with Claude Code.

Pints Yurt — Crowdsourced Pint-Price Map

daraphillips.com/pints-yurt

- Designed and built a crowdsourced map of pint prices across Limerick (React, TypeScript, Firebase), with outlier-resistant pricing so one bad report can't skew a pub's price, and review for new submissions.

EDUCATION

B.Sc. Immersive Digital Media & Spatial Computing

09/2021 – 06/2025

Technological University of the Shannon
First Class Honours 1:1

AWARDS

Academic Excellence Award — Best Overall Student & Best Overall Project

Technological University of the Shannon · 2025

SKILLS & TOOLS

Product & UX

User research & usability testing
Heuristic evaluation
Journey mapping & user flows
Design systems
Accessibility-first design
AI-assisted design workflows (Claude)

UI, Systems & Dev

Figma, Framer, Webflow
HTML, CSS, JavaScript, React
Unity, Blender
GitHub
Responsive layouts & interaction design
Typography & colour
Design handoff & implementation
